Prepared by the World Analysis Branch, International Economics Division, Economic Research Service, U.S. Department of Agriculture. Principal coordinators were John C. Dunmore III, Thomas A. Warden, and Thomasine B. McCall. Thelma Carpenter, Fannye G. Lockley, and Mary L. Fant provided statistical support. Editorial support was provided by Linda L. Hatcher, Research Information Branch, Economics Management Staff.

U.S. Agricultural Exports Down 11 Percent in Fiscal Year 1983 (see p. 2). Exports of farm products fell for the second consecutive year in fiscal year 1983 to \$34.8 billion. This drop was due in part to sluggish world demand, improved crop production abroad, more intense competition for import markets, and higher exchange rates for the U.S. dollar. The outlook in fiscal year 1984 is for an increase in export value due to higher commodity prices. Total export volume is expected to remain low primarily because of reduced soybean shipments.

U.S. Agricultural Imports Up 6 Percent in Fiscal Year 1983 (see p. 32). Values for agricultural imports, especially for competitive items such as live animals, dairy products, fruits, vegetables, beverages, and tobacco, gained by 6 percent to \$16.4 billion in fiscal year 1983. A relatively strong U.S. dollar made many imported products more attractive.

Foreign Exchange Value of U.S. Dollar Levels Off (see p. 56). Currency exchange rates favoring the U.S. dollar throughout most of 1983 reversed themselves in September after a further decline in interest rates on short-term deposits in overseas banks. The dollar declined against the German mark, the Japanese yen, and the Dutch guilder, and remained steady to higher relative to the Canadian dollar and British pound. The dollar remains strong compared with developing countries' currencies.

Western Europe: An Important Market for U.S. Agricultural Products (see p. 63). U.S. agricultural shipments to Western Europe totaled \$10.1 billion during fiscal year 1983, second only to Asia as a regional export market. Five Western European countries take more than \$1 billion of U.S. agricultural products annually, with the Netherlands and West Germany purchasing around \$2 billion in peak years. U.S. farm product exports to Western Europe have declined in recent years, however, due to increased emphasis on self-sufficiency and the sharply higher dollar exchange rates.

U.S. Export Share of Production Declines in Fiscal Year 1983 (see p. 71). U.S. agricultural exports as a share of farm production, based on cash marketings, fell to 22 percent in fiscal year 1983 from 24 percent the previous year. Reduced foreign demand and increased U.S. production caused the decline. Export shares were smaller for most major crops, including wheat, feed grains, rice, and cotton.

## U.S. Agricultural Exports Down 11 Percent in Fiscal Year 1983

U.S. agricultural exports fell 11 percent in fiscal year 1983 to \$34.8 billion. This decline marks the second consecutive year that the total value of U.S. farm exports has fallen from its fiscal year 1981 peak of \$43.8 billion and emphasizes the increased dependence of U.S. agriculture on world markets. Feed ration decisions in Europe and Japan are now as important to U.S. grain and oilseed farmers as feed decisions in the Corn Belt. Approximately 25 percent of U.S. agricultural production (on the basis of cash receipts) was exported in fiscal year 1982 compared with 12 percent a decade ago.

The volume of U.S. agricultural exports fell 8 percent to 145 million metric tons in fiscal year 1983, while export prices, on average, were moderately lower. Competition from other exporters intensified, with a resultant loss of market shares in wheat, rice, cotton, soybeans, and soybean meal.

The outlook for fiscal year 1984 calls for significant export price increases for most commodities, including corn, sorghum, soybeans, and soybean products. Therefore, even with volume projected at 4-5 million tons lower, the total value of U.S. farm exports is expected to climb 12 percent in fiscal year 1984 to the 1982 level of \$39 billion.

Countries with foreign exchange shortages such as Poland, Brazil, and Mexico have been uncertain markets in the early eighties. Credit guarantees from the Commodity Credit Corporation (CCC) to these and other financially strapped countries came to about \$5 billion in fiscal year 1983, the highest level on record.

### Wheat Exports Drop

Despite CCC credit guarantees and special wheat flour sales to Egypt, U.S. wheat and flour exports fell 15 percent in fiscal year 1983 to 38.3 million tons. The two largest U.S. wheat markets in recent years--China and the Soviet Union--did not buy any wheat after January 1983. India became the largest market, taking 3.9 million tons. Canada, Argentina, and the EC (France) competed intensely with the United States, each attempting to gain market shares through such measures as liberal credit arrangements, subsidy payments, and long-term agreements.

Prospects for U.S. wheat exports in fiscal year 1984 appear somewhat brighter, despite expectations of a better Australian crop. Wheat export prices are expected to remain near fiscal year 1983's \$162 a ton, and feed grain prices are expected to increase 25-30 percent, possibly expanding U.S. exports of feed quality wheat. Wheat sales to both the Soviet Union and China are expected in the 4- to 5-million-ton range. Based on

these and other factors, U.S. exports of wheat and flour are expected to approach 39 million tons in fiscal year 1984.

#### Feed Grain Exports Drop

U.S. feed grain exports in fiscal year 1983 fell another 4 million tons to 53.3 million. This drop brings the U.S. share of the world coarse grain market down to 60 percent from 72 percent in fiscal year 1980. World coarse grain trade has fallen 18 percent since its peak of 108 million tons in fiscal year 1981, as domestic grain production and nongrain feeds replace imported U.S. corn, sorghum, and barley. Feed grain exports to Western Europe fell 42 percent to 10.1 million tons. The soybean meal/corn price relationship in the EC has steadily favored soymeal use over the past 3 years. Surplus wheat and barley production in the EC and low prices for non-grain feeds and corn gluten have seriously impaired feed grain imports. At \$180 a ton, cost, insurance and freight (c.i.f.), compared with \$210 a ton for soymeal and corn, corn gluten feed can be used efficiently as both a protein source and an energy source.

Eastern Europe has cut livestock and poultry numbers in the past year or two for lack of feed, primarily imported corn from the United States. U.S. shipments of corn to Eastern Europe in fiscal year 1983, at 1.5 million tons, were only 21 percent of the 1981 peak of 7.5 million tons. The Soviet Union was the other major corn market that significantly cut U.S. purchases in fiscal year 1983, barely exceeding 3 million tons.

While Europe and the USSR bought less U.S. corn, East Asia and Mexico took advantage of the low-priced feed and (in the case of Mexico) credit extension. Japan, Mexico, Korea, Taiwan, and China together purchased almost 10 million more tons of U.S. feed grains in fiscal year 1983 than they had in fiscal year 1982.

The 1984 outlook calls for a mild reversal of the present downtrend in feed grain exports. Total feed grain exports are expected to increase 2 million tons, or 4 percent, despite expectations of hefty price increases.

#### Soybean Exports Dip Slightly

The soybean market experienced another successful export marketing year in fiscal year 1983. The United States exported 24.5 million tons of soybeans, 6.4 million tons of soybean meal, and 918,000 tons of soybean oil, with total earnings of \$7.8 billion, 8 percent below earnings in fiscal year 1982.

The U.S. oilseed sector is expected to undergo substantial shocks in fiscal year 1984. Lacking the carryover capacity of the grain sector, oilseeds had little cushion to absorb the production shortfalls in the 1983/84 crop. Therefore, after 2 years of low prices, oilseed prices are forecast to increase sharply in fiscal year 1984. Export tonnage should reflect this tightness, with soybean exports of 19.6 million tons, soybean meal 5.2 million, and soybean oil 660,000 tons, the lowest combined levels since 1978.

Cotton Exports  
Fall

Cotton exports fell 24 percent below year-earlier levels to 1.14 million tons in fiscal year 1983. Prices, however, increased steadily all year after bottoming out in the summer of 1982. Japan was the largest U.S. cotton market, taking 297,000 tons, followed by Korea and Taiwan at 277,000 and 77,000 tons, respectively. Cotton exports in fiscal year 1984 may remain at the previous year's level despite sharply reduced supplies in the United States. Textile demand is expected to improve with economic recovery now underway. (Steve Milmo, World Analysis Branch)

Table 1--U.S. agricultural exports: Value by commodity, October-September 1981/82 and 1982/83 and September 1982 and 1983

## U.S. Agricultural Imports Up 6 Percent in Fiscal Year 1983

U.S. agricultural imports were valued at \$16.4 billion during fiscal year 1983, up 6 percent over 1982's \$15.5 billion and the highest level since 1981. U.S. food import demand in fiscal year 1984 could exceed the record level of \$17.3 billion set in 1980 for several reasons: (1) the U.S. economic recovery, (2) a strong dollar, (3) the moderate rise in prices, and (4) severe drought in many States. Import demand expanded, especially for meats, vegetables, dairy products, fruits, tobacco, beverages, cocoa, feeds, seeds, and live animals.

Both competitive and noncompetitive commodities, principally vegetables, fruits, cheese, cocoa, rubber, live animals, feeds, seeds, tobacco, wines, and malt beverages, contributed to value increases. U.S. agricultural imports from developing countries, representing 58 percent of imports from all areas, totaled \$9.5 billion compared with \$6.5 billion from the developed countries. Brazil is the single largest source of U.S. farm imports, followed by Canada and Mexico.

### Noncompetitive Imports Up 3 Percent

Noncompetitive imports, accounting for nearly 33 percent of all farm imports, inched up by 3 percent from fiscal year 1982 to \$5.5 billion. Coffee imports, which totaled slightly over \$2.8 billion, rose slightly from the previous year. Table 8 shows U.S. import volumes for the 10 largest suppliers for fiscal year 1983 compared with those for 1982.

Table 8 --U.S. coffee imports: Quantity by principal origin

Country	:	1981/82	:	1982/83	:	Change
	:		:		:	
	:	-----1,000 metric tons-----				Percent
Brazil	:	217	:	234	:	8
Colombia	:	101	:	110	:	9
Mexico	:	84	:	91	:	8
El Salvador	:	56	:	70	:	25
Uganda	:	67	:	63	:	-6
Indonesia	:	77	:	66	:	-14
Guatemala	:	45	:	49	:	9
Ecuador	:	48	:	51	:	6
Ivory Coast	:	56	:	37	:	-33
Ethiopia	:	35	:	33	:	6
Other	:	273	:	257	:	-6
World	:	1,059	:	1,061	:	0

The unchanged volume indicates that U.S. coffee consumption is continuing its long-term decline. Average monthly wholesale prices for Brazilian coffee in the United States declined from \$1.36 in September 1982 to \$1.30 on September 30, 1983.

Cocoa beans and products, the second leading noncompetitive U.S. import, totaled \$829 million, 17 percent higher than year-earlier levels. The volume jumped 31 percent as import unit prices fell by 11 percent. Larger imports were the result of manufacturers replenishing stocks to maintain normal operation. The Ivory Coast supplied nearly 26 percent of U.S. cocoa import volume in fiscal year 1983 compared with 18 percent the previous year. Brazil, the Dominican Republic, Nigeria, and Ecuador were the other major suppliers.

Natural rubber imports totaled \$582 million, about the same as those in fiscal year 1982. Volume also remained the same at 654,000 tons. Indonesia supplied 51 percent of U.S. rubber imports, while Malaysia, Thailand, Singapore, and Liberia provided nearly all of the remainder.

For other noncompetitive imports, values increased for tea, essential oils, spices, and bananas, while wool and fiber values declined. U.S. imports of bananas and plantains, which enter the U.S. duty-free, accounted for 81 percent of all imported horticultural products, totaling \$585 million. Bananas and plantains as a group are the third major noncompetitive import. Nearly all of the bananas and plantains are from Latin American countries.

Competitive  
Imports Up 7  
Percent, Despite  
Declines for Beef  
and Sugar

Competitive imports of \$10.9 billion expanded 7 percent above those of fiscal year 1982. Vegetables, dairy products, orange juice, tobacco, feeds, seeds, wine, malt beverages, and live animals accounted for the major increase in noncompetitive imports. Beef and veal, accounting for 66 percent of all meat imports, declined by 3 percent in value to \$1.2 billion; volume dropped 4 percent to 586,000 tons, as U.S. beef output recovered. Australia supplied about 50 percent of the fresh and frozen beef and veal by volume, with New Zealand shipping over 29 percent. The volume of canned pork, mainly from Denmark, Poland, and Hungary, increased slightly, while the volume of fresh and frozen pork increased sharply.

The value of sugar imports fell 17 percent to \$974 million, while volume dropped by 26 percent to 2.6 million tons. However, import unit prices recovered in fiscal year 1983, averaging about \$380 a ton compared with \$340 in 1982. Wholesale prices in U.S. markets have risen slightly from 20.6 cents a pound on September 15, 1982, to 22.0 cents a pound as of September 30, 1983. World surpluses, higher duties and fees, restrictive import quotas, and higher use of corn sweetener substitutes by the beverage industry reduced sugar imports. The Dominican Republic, the leading sugar supplier, provided 16 percent of the total import volume. Import volume also declined from most other suppliers, particularly Brazil, Australia, Argentina, and Thailand. Higher output in the

Philippines and Guatemala led to substantial volume increases. Despite reduced output, volume increased sharply from Peru.

Fruits, Vegetables,  
Cheeses, Live  
Animals, and  
Tobacco Gain

Fruit and preparation imports jumped 17 percent in value to over \$1 billion, as imports of concentrated orange juice from Brazil, canned pineapples from the Philippines, and fresh grapes from Chile substantially exceeded fiscal year 1982 levels. Vegetable imports totaled \$1.1 billion, with substantial gains in canned mushrooms from Taiwan and China. The volume of fresh vegetables from Mexico also increased, especially tomatoes, cucumbers, onions, asparagus, peas, and squash.

Cheese, accounting for over 50 percent of U.S. dairy product imports during fiscal year 1983, were valued at \$394 million, an increase of 7 percent from 1982's value, with gains from Western Europe and New Zealand. Although casein imports from New Zealand declined, those from Ireland and other European countries increased.

Live animal imports jumped 38 percent in value to \$555 million largely because ranchers replaced their herds after severe drought and Canadian and Mexican currencies depreciated relative to the U.S. dollar. Cattle import numbers soared by 29 percent to over 1 million compared with 815,000 in fiscal year 1982. Swine entries more than doubled to 458,000 head due to herd reduction and favorable dollar exchange rates.

Imports of unmanufactured tobacco increased 36 percent in volume during fiscal year 1983 to 239,000 tons, valued at \$734 million. Turkey, Brazil, South Korea, and Mexico were the major suppliers. While oriental leaf remains a large proportion of imports, machine-threshed scrap tobacco has become more important in the last 2 years.

Among other competitive imports, the value of vegetable oil imports slipped 6 percent to less than \$400 million mainly due to reductions in coconut oil, which accounted for about 50 percent of all vegetable oil imported into the United States. Palm and palm kernel oil imports rose 30 percent in volume as prices fell. Increased demand, coupled with a reduced output of soybean oil and higher domestic prices, probably will result in higher palm and palm kernel oil imports in fiscal year 1984. The Philippines supplied the bulk of the coconut oil, while Malaysia provided over 85 percent of palm oil.

Wines and malt beverage imports rose 8 percent in value and totaled \$1.3 billion in fiscal year 1983. Italy, France, and West Germany are the major suppliers of the wines, with the Netherlands, Canada, and West Germany providing the beers. (Charles E. Goode, World Analysis Branch)

## Foreign Exchange Value of U.S. Dollar Levels Off

After a summer of headlong surges and burgeoning strength, the U.S. dollar began to show definite signs of retreat from the highs of early September, but has since regained most of those losses. The Japanese yen benefited most from the U.S. dollar's adjustment. The British pound remains a minor participant in recent foreign exchange episodes.

The primary reason for the drop in the value of the dollar in mid-October was a change in interest rates payable on short-term deposits of U.S. currency in overseas banks. The London interbank offered rate (LIBOR) on 3-month dollar deposits fell from 10.3 percent on September 1 to just above 9.5 percent in mid-October. As a result, the dollar became less desirable to hold for speculative purposes. However, the prevailing view is that interest rates have bottomed-out. Foreign exchange traders have noted recent efforts by the Federal Reserve to reduce the growth rate of the money supply back into target ranges. The economic recovery may be exerting pressure on credit markets already concerned with increased debt financing by the Treasury.

The British pound remains very weak. The United Kingdom has become a net importer of manufactures, implying that policy choices available to that government (i.e., lowering key interest rates) will lead to lower values for sterling. In addition, the recovery in the United Kingdom now appears quite fragile, discouraging capital flows into that country.

The dollar could still decline against the Japanese yen. Forward markets for that currency have narrowed to the extent that the interest rate advantage once accorded the dollar has also been squeezed. The German mark is under pressure from interest rates, internal political discord, and the Middle East conflict, which could affect petroleum supplies.

The general weakness of currencies in the developing world will lead to an increase in the dollar's overall strength in agricultural markets in the months to come. This increase is best illustrated by examining the trade-weighted indices of the foreign exchange value of the dollar, specifically the series calculated for major U.S. wheat markets. The foreign exchange constraints faced by many countries in the developing world (a significant market for wheat) have markedly increased the home currency cost of purchasing U.S. dollars, with particularly dramatic rises noted in the last 2 years. (David Stallings, World Analysis Branch)

## Western Europe: An Important Market for U.S. Agricultural Products

Western Europe is second only to Asia as an export market for U.S. farm products even though U.S. exports to the region have declined since 1980. In fiscal year 1983, U.S. shipments to Western Europe were valued at \$10.1 billion, 30 percent of total U.S. agricultural exports. Of the \$10.1 billion, the EC took \$7.6 billion, and Other Western European Countries (OWE) accounted for \$2.5 billion.

U.S. farm product exports to both the Netherlands and West Germany exceeded \$2 billion in recent years. Spain, the United Kingdom, and Italy exceeded \$1 billion and have also been major U.S. markets for many years.

The value of U.S. agricultural exports to Western Europe has declined in recent years, from a peak of \$13.3 billion in fiscal year 1980 to \$10.1 billion in fiscal year 1983. Since 1980, the U.S. dollar has appreciated 64 percent against the European Currency Unit (ECU). The exchange rate averaged 0.72 ECU's per dollar in 1980 and is currently about 1.18 ECU's. Over 25 percent of this increase in the dollar's value occurred during the first 9 months of 1983. The U.S. dollar has also strengthened against the currencies of OWE. The strong dollar has made the cost of most imports from the United States much more expensive for European importers and has significantly contributed to the decline in U.S. agricultural exports.

Western Europe's increasing agricultural production and self-sufficiency in the food sector have also contributed to the reduced demand for U.S. agricultural products, particularly for grains. High prices, import protection, and export aids have encouraged expanded production.

Western Europe is a particularly important market for certain U.S. agricultural products, accounting for 50 percent or more of all U.S. exports of soybeans, oilcake and meal, nuts and preparations, and tobacco. More than 25 percent of our exports of feed grains, animal fats and oils, hides and skins, and "other miscellaneous agricultural products" go to Western Europe.

For both the EC and OWE, about 20-25 percent of total agricultural imports originate in the United States. This percentage has increased somewhat during the last decade.

Western Europe is also a significant source of farm products imported by the United States--\$2.9 billion in fiscal year 1982. U.S. imports are more diverse than are U.S. exports and tend to be more highly processed products. The major import items are wine, malt beverages, prepared and preserved meats, cheese, and vegetable preparations.

The United States enjoys a favorable agricultural trade balance with Western Europe. During the last several years, the U.S. annual trade surplus has ranged between \$8.5 and \$9.2 billion with all of Western Europe and between \$6.1 and \$6.8 billion with the EC.

Grain Trade  
Patterns Change

Western Europe has been a relatively stable market for 21-24 million tons of U.S. grain yearly for the last decade. The EC takes slightly over half of the grain, but the EC share is declining relative to OWE.

During the last 10 years, the EC has reliably bought 2-3 million tons of high quality U.S. wheat annually. During the same period, U.S. exports of coarse grains to the EC declined at an average rate of 500,000 tons per year. The decline in the EC's demand for U.S. feed grain results from its own increased grain production and a shift to larger proportions of oilmeals and nongrain feed ingredients in livestock feeds. U.S. exports of wheat and especially of coarse grains to OWE have increased during the last decade, offsetting the decline in exports to the EC.

Grain trade patterns, however, changed significantly during the 1983 marketing year. Total U.S. grain exports dropped about 50 percent to 12.5 million tons. The region's record grain harvest and stagnant demand for feed grain largely accounted for the decline.

U.S. exports of both wheat and coarse grains to Western Europe are expected to improve in fiscal year 1984. Europe's grain production, particularly feed grains, declined in calendar year 1983, and surplus barley stocks will be depleted. Renewed economic growth in 1984 is expected to stimulate expansion in the livestock sector and in the demand for feed. Economic recovery will also stimulate the starch industry, a large user of imported corn from the United States.

Soybean Trade:  
Seasonal Decline,  
Secular Moderation

The rapid 20-year expansion of U.S. soybean exports to Western Europe has ended. This halt in expansion has been marked by increasing sensitivity to price at the high average rate of soybean meal consumption in Western Europe and the slow growth in demand for livestock products. U.S. soybean exports, which grew an average 9.9 percent per annum from 1973 to 1978 compared with 7.1 percent from 1978 to 1982, are forecast to decline in 1983 and 1984.

U.S. exports of soybean meal to Western Europe have been hurt by subsidized meal exports from Brazil and the general expansion of soybean cultivation there. The U.S. share of European meal imports fell from 52 percent in 1974 to 33 percent in 1982, most of the loss being filled by Brazilian exports.

The expansion of European crushing facilities in the seventies helped depress U.S. meal exports, although virtually no new capacity has been added in the last 3 years. Because of low

profit margins for soybeans, many facilities are now crushing subsidized domestic rapeseed for part of the year. U.S. soybean meal exports to Western Europe have remained constant since 1974 and are forecast to decline in 1983 and 1984 because of the high prices.

In the 10-member EC, soybean meal use has reached 12 percent of total commercial feed requirements and is unlikely to expand significantly beyond this level. Meal demand has become more responsive to price than in the years of rapid expansion.

Soybean prices have risen more than 40 percent in European currencies since May 1983, and soybean meal prices have gone up 35 percent due to the U.S. crop shortfall. The sharp price rise for the 1984 marketing year is forecast to lead to a 14-percent decline in EC soybean meal consumption from the 1982 high of 16.3 million metric tons. This decline is translated into soybean imports of 9.7 million metric tons, nearly a 20-percent decline. Meal imports are forecast to decline only 6 percent since a larger output is expected from Brazil where soybean area is likely to expand to take advantage of the high international prices.

Weak demand for soybean meal can be anticipated in OWE as well. In Spain, a major consumer, higher soybean prices slow growth in livestock production, and a recently introduced tax on soybean meal will reduce demand. Total imports of soybeans and meal in OWE are expected to decline in 1983 and again in 1984 to 85 percent of their 1982 peak.

U.S. soybean and meal exports to Western Europe, after the expected decline of the 1984 season, will probably recover to around historic high levels. Competition from both rapeseed and sunflowerseed will increase as total oilseed demand remains stagnant or expands moderately in concert with the growth in total meat demand. Slow population growth implies that this increase in demand for meat will be moderate.

The low profitability of the European oilseed crushing industry, and its lack of expansion, will likely cause capacity to stabilize at about the 1982 utilization level, while the current season's crush will be substantially below this level. The industry's situation in the EC could deteriorate further, however, if the Community inaugurates a proposed tax on vegetable oil consumption. Such a tax would further erode the industry's margins and would shift EC import demand from beans to products.

#### Animals and Animal Products

The total value of U.S. exports of animals and animal products to Western Europe in fiscal year 1983 was \$852 million, of which nearly 90 percent was shipped to EC-10 markets. U.S. market development efforts for dairy, livestock, and poultry are severely hampered by a combination of tariff and nontariff barriers for these commodities, although some specific product categories are important. For example, exports of cattle hides to Western Europe were valued at an estimated \$80 million in

fiscal year 1983. However, sales to Italy, the largest importer of U.S. cattle hides, have declined due to the combined effects of international recession on the demand for Italian shoes and the stronger dollar which pushed up prices of U.S. raw cattle hides. U.S. sales of cattle hides to Italy in fiscal year 1983 were valued at \$24 million, 38 percent below those of a year earlier. Prospects for U.S. exports in fiscal year 1984 are not expected to improve unless economies improve significantly in customer countries like Italy.

U.S. exports of inedible tallow are significant within the animal product category. An estimated 264,000 tons were shipped to Western Europe in fiscal year 1983, valued at \$97 million. The Netherlands, West Germany, and the United Kingdom are the major customers. Purchases by these three countries declined 43 percent, 51 percent, and 59 percent, respectively, reflecting both lower volumes and prices.

France, the United Kingdom, the Netherlands, and Belgium-Luxembourg together have provided a brisk market for U.S. variety meats. During the first 6 months of 1983, these countries took \$47 million in variety meats from the United States. Although purchases declined in 1983, the market is expected to improve if economic recovery progresses in these countries.

The United States, a major cheese importer, consumes large quantities of cheeses supplied by Western Europe. The Scandinavian countries supply over half the quantity of cheese imported by the United States from Western Europe. Denmark is by far the major West European supplier of cheese. In recent years, Denmark has shipped over 13,000 tons of cheeses annually to the United States, nearly one-third of the annual U.S. import quota of 43,554 tons of EC-produced cheese. Finland emerged as Western Europe's second largest supplier to the United States in fiscal year 1983, shipping approximately 11,000 tons, largely of Swiss/Emmenthaler varieties. Virtually all of the important West European cheese exporting countries increased their shipments to the United States in fiscal year 1983. During the first 6 months of calendar year 1983, the value of U.S. imports of cheeses supplied by the EC-10 alone grew by 9 percent to \$153 million, partly reflecting buoyant consumer demand and lower import prices resulting from a stronger dollar.

#### Tobacco Exports Level Off

The strong dollar is dampening sales of U.S. tobacco to Western Europe, but other less transitory factors are also playing a detrimental role. Total tobacco consumption is decreasing in Western Europe, and consumers are favoring new sources of light tobaccos. These two factors are forestalling any rise in U.S. sales that might otherwise result from the conjunction of the European trend toward cigarette blends with greater percentages of flue-cured and burley leaf tobacco and the prospective subsiding of the value of the dollar. Governmental policies in Europe have encouraged this situation.

In addition to conducting the familiar anti-smoking campaign measures, Europe is effectively discouraging tobacco consumption by increasing taxes on tobacco products. This tax policy is especially noticeable in West Germany and the United Kingdom, the region's largest importers of tobacco, where new taxes in 1983 followed those in 1982. Similar developments have taken place in France.

The source of Western Europe's tobacco imports is changing. As a result, the market share for U.S. tobacco has declined even though the sorts of tobacco in which the U.S. has quality advantages are gaining ground in European blends. Imports from less developed countries are gaining ground because of improved quality and, in the case of the EC, because of favorable quotas for flue-cured tobacco under the EC's generalized system of (tariff) preferences, as well as certain exemptions from that quota system.

The major West European tobacco-producing countries--Greece, Italy, France, and Spain--are stepping up efforts to grow more light tobaccos. The effects of this shift on imports have not yet been felt. Except for France, imports of flue-cured tobacco by these countries continue upward because production of the increasingly preferred lighter cigarettes is outpacing domestic flue-cured production increases. However, within the next few years, light tobacco produced in these countries will begin to be substituted for imports (Spain has increased minimum requirements for the use of domestic leaf in cigarette blends). Nevertheless, imports will level off because of quality deficiencies in the domestically produced light tobaccos. At the same time, lesser quality tobacco will be exported.

#### Cotton Exports Falter

U.S. cotton exports to Western Europe dropped slightly in fiscal year 1983 from the previous year's record. In fiscal year 1984, the textile industry in most West European countries is expected to pick up as the various economies recover. The region's total cotton imports are forecast to increase in fiscal year 1984, especially in Spain, where a very poor crop will mean significantly more imports. However, although Western Europe's cotton imports may continue to increase, the U.S. share of the West European market will likely decline because of the strong dollar. (M. Cohen, M. Lambert, S. Sposato, and R. Trostle, Western Europe Branch)

## U.S. Export Share of Production Declines in Fiscal Year 1983

U.S. agricultural exports as a share of farm production (based on cash marketings) fell to 22 percent in fiscal year 1983 from about 24 percent the previous year. This decline resulted from a reduction in U.S. exports while domestic production increased. In fiscal year 1983, however, grain production outside the United States was also at record levels, thereby limiting demand for U.S. products.

The major export commodity most seriously affected was wheat. The proportion of U.S. wheat production exported in fiscal year 1983 was at its lowest level in 6 years, 51 percent compared with the 1977-81 average of 64 percent, and would likely have been lower without the use of CCC credit guarantees such as blended credit. Canada also exports a substantial amount of its wheat production (over 85 percent in fiscal years 1980 and 1981). Along with Argentina and the EC, Canada has expanded wheat production in the past few years and competes with the United States in export markets.

U.S. rice exports also fared poorly vis-a-vis other major exporters, and only 45 percent of production was exported. Thailand and Pakistan have made inroads into such U.S. rice markets as the Mid-East and Sub-Saharan Africa, primarily Nigeria. As with wheat, relatively high U.S. support prices have encouraged U.S. and other world producers to expand production.

The predominance of the United States as a global supplier of feed grains helped to stem the loss of world market shares in 1983, particularly for corn and grain sorghum. In addition, severe drought in one of the world's major suppliers of corn, South Africa, has forced that country to import corn from the United States. The United States exported 25 percent of U.S. sorghum production and 22 percent of corn production in fiscal year 1983. These shares are low compared with the recent past, when corn exports were nearly 33 percent of production and sorghum went as high as 50 percent.

Soybeans were one of the few commodities that were able to maintain some balance between production and exports. Over 50 percent of all U.S. soybeans (including meal and oil) were exported, as has been the case in the past. A higher proportion of that figure was in beans in fiscal year 1982 as Brazilian and Argentine soybean meal reduced the U.S. market share.

The share of U.S. cotton production that enters the world market fell slightly to 43 percent in fiscal year 1982, but remained well below the record 62 percent set in 1980. After 5 years of substantial annual purchases ranging from 112,000 to

514,000 tons, the Chinese market virtually dried up in 1983, due largely to 3 consecutive years of record production in China. (Steve Milmoe, World Analysis Branch)

## To Market, to Market...

Keep a step ahead of your competitors by getting the best government forecasts around on commodity-specific export potential through 1990 for selected countries in Africa, Asia, Latin America, and the Mideast.

Each issue of **Export Market Profiles**—a new series by USDA's Economic Research Service and Foreign Agricultural Service—will highlight the production potential of one country's agricultural sector, major trade policies, and export potential for U.S. commodities.

Titles off press thus far in the series include: **TAIWAN:** An Export Market Profile, 96 pp., \$4.50, GPO no. 001-000-04345-5. **DOMINICAN REPUBLIC:** An Export Market Profile, 36 pp., \$3.50, GPO no. 001-000-04364-1.

To order, write to Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Make check or money order payable to Superintendent of Documents. Be sure to include the report's GPO number in your order. For faster service, call GPO's order desk at (202) 783-3238 and charge your purchase to your VISA, MasterCard, or GPO deposit account. Foreign addresses, add additional 25 percent.

As future titles become available, they will be advertised in **ERS Abstracts**, a free newsletter published 4-5 times per year. To subscribe, write to ERS Abstracts—EMP, EMS-INF, Room 4309-S, U.S. Department of Agriculture, Washington, D.C. 20250. Or call Tom McDonald on (202) 447-7305.
